

Building Refurbishment

External Wall **Insulation**

Window & Door **Replacement**

Rainscreen **Cladding**

Building **Surveys**

Roofing

Concrete & Masonry **Repairs**

Specialist Contractor

protecting your **vital infrastructure**

CRL is a specialist contractor for the **inspection and repair of bridges and tunnels**. We have been established since 1955 and have a network of six regional offices in the UK **providing a comprehensive refurbishment service**. CRL Surveys are UKAS Accredited to undertake the initial condition surveys to identify the nature and extent of any structural deterioration. This allows us to then provide professional and informed advice on how to repair the defects in a **cost effective and sustainable manner**. We are a multi-award winning company, renowned for providing professional, **innovative engineering solutions**.

CRL regularly undertakes refurbishment work while the **building remains in use**. This requires a **high degree of skilled project planning** to fully comply with the needs of the occupier, be it residential, office or industrial. **Innovative techniques** are used to provide **cost effective, non-intrusive solutions**; **Bespoke temporary access** systems designed to **minimise disruption** and speed up the program delivery and the use of **liquid applied** membranes to waterproof podium decks, balconies and roofs that **minimise waste** and **improve project efficiency**.

Enhanced Performance

improving **thermal efficiency**

Thermal efficiency can be **significantly enhanced** with the use of **Insulated Render** and **Rainscreen Cladding systems**. The Insulated Render system is **applied to pre-fixed polystyrene or fibre panels**, with the **Rainscreen Cladding systems** being **simply fixed directly to the substrate** without the need for an additional render system. The company's facades division, **CRL Facades**, is able to **design and install systems** which will **significantly enhance the thermal performance** as well as **improve the overall appearance of the building**, making the structure **appropriate for the 21st century**.

Structural maintenance is often an **important** part of **building envelope refurbishment**. Our **in-house workforce** undertakes **concrete and masonry** repairs compliant with European Standards as well as the **installation of wall ties** to stabilise masonry or cladding. This work is often undertaken in conjunction with the **application of protective coatings** and the replacement of doors and windows, adding not only **aesthetic quality** but also **significantly prolonging the life of the building**.
